

# Strategic Management of Environmental Licensing

In many cases it is necessary to have a strategic vision for environmental licensing. Besides helping in the decision make of the best approach, work time of execution and identification of the process main critical points, our team understands the key themes of the assessment of socio-environmental impacts and can with transparency dialogue and approach such themes, without loss of efficiency in addressing unnecessary themes or removing the focus of the main problems.

Our team manages and monitors the entire environmental licensing process with the environmental agencies of the Brazilian states, from the licensing process planning to the final release of the licenses, including technical support to respond the regulatory agencies requests, processes involving the Public Prosecution Service, preparation of specific socio-environmental studies, as well as participation in public hearings.
