

# Bench Tests

The management process of areas in rehabilitation outlines intervention measures and applicable techniques, which can be tested by means of bench tests, where the application of the selected techniques is simulated in the laboratory to evaluate their effectiveness.

EBP Brazil offers the following bench tests for water and soil, in a complete way, including the collection of samples:

- Aerobic biodegradation
- Anaerobic biodegradation
- Biostimulation
- Electrokinetics
- Specific tests
- Chemical Immobilization
- Chemical Oxidation
- Chemical Reduction
