

Water Balance

EBP Brasil has experience and a highly qualified technical team for the processes mapping of agricultural, automotive, construction, cosmetics, mining, services and chemical. The following steps are necessary for the water balance:

- Process Mapping
- Identification of water flows
- Weather conditions for the water balance, if applicable
- Calculations for the water balance
- Preparation of the management plan and improvements

EBP Brasil was a pioneer in water footprint work in Brazil, being a partner of the old Water Footprint Network initiative for several years, actively participating in the development of the topic in the market
