

Design and Implementation of Industrial and USW Landfills

EBP Brasil elaborates geotechnical confinement and landfills projects to receive different classes of residues, such as foundry sands, contaminated soil from industrial areas, urban solid residues, among others, in compliance with the legislation in force and the technical requirements established by the environmental control agencies.

Pioneer in this segment in Brazil, EBP Brasil carried out the first works of implantation of landfills and geotechnical confinements by the application of the innovative technology of the waterproofing system called "multi-layer".

Here are the services we can provide for your company:

- Projects and Implementation of Class I and II Industrial Waste Landfill;
- Projects and Implementation of Urban Solid Waste Landfill;
- Projects and Implementation of Geotechnical Confinements;
- Projects and Implementation of ITVR - Waste Treatment and Recovery Industry (sorting, landfill, autoclave and infrastructure);
- Geotechnical and Environmental Monitoring of Landfills and Geotechnical Confinements;
- Adequacy of Industrial and Domestic Landfills;
- Contaminated Soil Removal
