

Risk Analysis Study (EAR)

The elaboration of risk analysis studies is a requirement for facilities and/or activities considered dangerous, aiming at the prevention of environmental accidents that may put at risk the health and safety of the population, as well as the environment as a whole.

The risk analysis study and strategic advice in the risk assessment in different contexts and in decision making process are necessary whenever there is handling or stock of dangerous goods like flammable, toxic or explosive products.

In addition to these services, we assist our clients in the preparation, review and maintenance of the following documents:

- Risk Management Programs;
- Action Plans and Emergencies;
- Individual Action Plans and
- Contingency Plans.
